

I can't work out column addition!

I will help you with your method.

Me too, it's simple!

first you will add two to one is three then one to one is two that and you get 23!

12
+ 11

23

All you need to do is add 2 to 1 and 1 to 1 and your are done.

I think I might know how to do column addition

is his if 14 plus thirty three equals 42 we carry it over

yes you have got it!

Thanks guys your the best!

lets celebrate!

Yayy now I can pass my exam

WHAT? THERES A XAM ON THAD
